Full-Stack Engineer with over 2 years of experience architecting and scaling enterprise applications using Next.js, TypeScript, and modern cloud ecosystems. Proven track record of navigating complex Fortune 500 codebases, optimizing high-volume data workflows, and implementing automated CI/CD pipelines. Focused on delivering high-performance, maintainable systems.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, C++, C
- **Frontend & Mobile:** Next.js, React, React Native, Tailwind CSS, Zustand, TanStack React Query, Framer Motion, GSAP
- **Backend & Databases:** Node.js, Express.js, Flask, PostgreSQL, MongoDB, Prisma ORM, REST & GraphQL APIs
- **Cloud, DevOps & Tools:** Docker, AWS (S3), CI/CD (GitHub Actions), Linux, Git, Pandas, System Design

EXPERIENCE

Tata Consultancy Services (TCS)

Aug 2024 - Present

Full-Stack Engineer

Bangalore, India

- **90%+ reduction in page load times** achieved by architecting the migration of legacy enterprise applications to Next.js, leveraging **Server-Side Rendering (SSR)** and Server Actions.
- **40% increase in overall delivery speed and a 95% reduction in translation time** achieved by developing and integrating custom **agentic AI workflows**, demonstrating real AI ROI and optimizing team code flow.
- **Zero network timeouts for massive file transfers (up to 50GB)** by engineering a highly scalable data pipeline using Next.js and **AWS S3**, implementing **multipart chunked uploads** to optimize memory management.
- **Eliminated unnecessary API polling and reduced server load** by designing a **custom asynchronous state management** library featuring timed caching and optimistic UI updates to complement the existing **Redux architecture**.
- Architected and developed a **custom internationalization (i18n) routing system** from scratch using advanced **Next.js rewrite configurations** to bypass complex deployment constraints. Ensuring **zero disruption to existing API endpoints and health-checks**
- **Mentored 10+ engineers**—including senior developers—by acting as the primary Next.js Subject Matter Expert (SME), standardizing modern React paradigms and resolving complex architectural blockers across multiple teams.

Skiaverse

Jul 2023 - Dec 2023

Full-Stack Developer Intern

Remote

- **Successfully deployed an end-to-end web application** by driving the complete software development lifecycle as the sole developer, utilizing **React (Vite)**, **Express.js**, and **PostgreSQL** from initial schema design to production.
- **70% speed increase in existing application modules** achieved by overhauling data fetching and caching architectures, while single-handedly architecting the remaining core features with **lazy loading**, **dynamic routing**, and **optimistic state updates**.

EDUCATION

Techno Main Saltlake

Kolkata, India , 2020 – 2024

B.Tech, Electronics and Instrumentation

Aggregate CGPA: **9.4**

PROJECTS

Hangout Lobby - Real-Time Chat & Community Platform

[\[GitHub\]](#)

- Architected a scalable, **low-latency communication system** utilizing **WebSockets** with **HTTP polling fallbacks** for zero-loss concurrent messaging, alongside **WebRTC**-based voice and video channels.
- Designed a Next.js and Prisma backend leveraging **cursor-based pagination** and **TanStack React Query** caching to minimize database payloads and optimize client-side memory during high-volume chat histories.

Multi-Tenant E-Commerce CMS & Storefront

[\[GitHub\]](#)

- Engineered a **headless, multi-tenant CMS** capable of orchestrating inventory, product relations, and content for multiple independent storefronts from a **centralized database architecture (PostgreSQL)**.
- Developed a secure administrator dashboard featuring real-time revenue analytics and a robust **RESTful API layer**, integrating Stripe webhooks for **seamless cross-domain storefront data consumption**.

SaaS AI Companion Platform

[\[GitHub\]](#)

- Engineered a full-stack SaaS platform utilizing the **LangChain framework** and **Llama-2** to configure, persist, and deliver **context-aware, personalized AI conversational experiences**.
- Implemented **Pinecone vector embeddings** for **long-term persistent conversational memory**, optimizing prompt workflows to reduce **LLM inference latency** alongside **Stripe** for subscription billing.
